

```
jblazina@cscd-linux01:~/CSCD240/HW2$ ./SortModifyArrayBasic
```

This is the basic part of the program that asks the user to type the number of integers, i.e., 'n'. Next, allocate memory for 'n' integers, read the values and average of 'n' integers. Lastly, the allocated memory needs to be freed.

Read using scanf how many integers you would like to type:

5
Please type 'n' integers:

6
4
3
2
1

Displaying the numbers:

6, 4, 3, 2, 1,
Mean of the numbers is: 3.200000
Median of the numbers is: 3.000000
Standard deviation of the numbers is: 1.923538

```
jblazina@cscd-linux01:~/CSCD240/HW2$ ./SortModifyArrayBasic
```

This is the basic part of the program that asks the user to type the number of integers, i.e., 'n'. Next, allocate memory for 'n' integers, read the values and average of 'n' integers. Lastly, the allocated memory needs to be freed.

Read using scanf how many integers you would like to type:

1
Please type 'n' integers:

100
Displaying the numbers:
100,
Mean of the numbers is: 100.000000

Median of the numbers is: 100.000000
Standard deviation of the numbers is: 0.000000

```
jblazina@cscd-linux01:~/CSCD240/HW2$ ./SortModifyArrayBasic
```

This is the basic part of the program that asks the user to type the number of integers, i.e., 'n'. Next, allocate memory for 'n' integers, read the values and average of 'n' integers. Lastly, the allocated memory needs to be freed.

Read using scanf how many integers you would like to type:

2
Please type 'n' integers:

50
100
Displaying the numbers:
50, 100,
Mean of the numbers is: 75.000000
Median of the numbers is: 75.000000
Standard deviation of the numbers is: 35.355339
jblazina@cscd-linux01:~/CSCD240/HW2\$
