

```
jblazina@cscd-linux01:~/CSCD240/HW2$ ./SortModifyArrayBonus
```

I couldn't quite get this bonus part to work properly, something to do with the input of the first character I think. I tried.

This is the bonus part of the program that asks the user to type in as many integers as they want and to dynamically allocate memory and free it.

Type as many integers as you want:

1

Typing the number:

2

Displaying the numbers so far:

2, 0,

Mean of numbers is: 1.000000

Median of numbers is: 1.000000

Standard Deviation so far is: 1.414214

Typing the number:

3

Displaying the numbers so far:

0, 3,

Mean of numbers is: 1.500000

Median of numbers is: 1.000000

Standard Deviation so far is: 2.121320

Typing the number:

4

Displaying the numbers so far:

0, 3,

Mean of numbers is: 1.500000

Median of numbers is: 1.000000

Standard Deviation so far is: 2.121320

Typing the number:
